Description:

Fundo Valle Perdido

The last frontier!

This 5,063-acre (2050 ha) property is a handcrafted safe haven of majestic beauty. This property features 3 valleys as well as its own private lake whose source-water flows from a nearby centuries old glacier. The lake, 3 waterfalls, 2 rivers and a number of streams all boast clear crystalline, mineral rich waters. Many large healthy trout and salmon swim freely in the river. There are giant old growth trees, deep fertile organic soils and some of the cleanest freshest air you'll ever breathe.

The newly built infrastructure comprises 15 kilometers (9.3 miles) of sturdy gravel roads to get around the Fundo on. Besides the many roads there is a small hydroelectric power station, back-up generator and state of the art heating system for the three cabins. The lovely cabanas are set up in a futuristic modular pod design. Each of the two (en suite) sleeping units are completely private and with their own view of the blue ice glacier. There is easy access over wooden walkways connecting them to the central gathering cabana with kitchen facility. Here the open concept dining/living room can be enjoyed by all. But when you're ready to call it a night you have complete quiet in your own space.

Each of these cabins has been designed and built in Europe, of the highest quality materials. These building materials & finishes are green and non-polluting, and taken from renewable resources, such as the lovely bright bamboo flooring used throughout. Shipped directly from France and assembled on-site they are replete with cosmopolitan fixtures, including a one off dazzling titanium shower surround; and other amenities such as the Jacuzzi tubs and brand name appliances. Included as well are highly fashionable, well-made, practical yet contemporary Italian designer furnishings.

This one of a kind property presently has its only main off-road access via a river crossing. Here your privacy is completely assured! Isolated yes but not cut off from the world; inter-net and television are available via satellite. So you can relax, unwind, and balance out your perspectives here but never have to be cut off from news, business or important worldwide communications.

The developer has spent the last 2-1/2 years tackling the many challenges involved bringing this project to fruition. Management of the work and complex installations has been closely supervised and managed by a professional building company from the Capital area. All of the painstaking work begun in creating this wonderful private world for the next extraordinary owner, is now almost done.

Only a savvy & successful visionary will understand this property. That ultimate buyer will get complete legal assistance with residency and a two-month transition assistance period. Only a few details remain to be finished by June, so just pack your bags, book a flight or hop a helicopter and fly into the Lost Valley!
